## CORN HYBRIDS TECH INFO SUMMARY

### POSITIONING AND MANAGEMENT

With excellent early vigor and great disease tolerance, LH 5099 VT3 promises to be a great corn-on-corn hybrid. LH 5099 VT3 has a good balance of defensive characteristics and yield. Developed through vector-stack transformation, or VecTran™ technology, this hybrid is a stacked combination of the new YieldGard VT Rootworm/RR2™ with the YieldGard® Corn Borer trait added via conventional breeding. VecTran uses a cleaner, more natural gene insertion process. The result is a more active promoter and better distribution of the rootworm gene through the roots.
