CORN HYBRIDS TECH INFO SUMMARY

POSITIONING AND MANAGEMENT

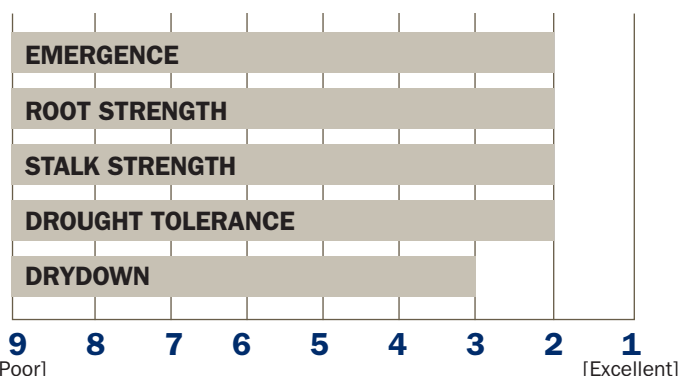

LH5803 3000GT will win a lot of test plots. This hybrid allows farmers to experience very high yield potential. Even though it has very high yield potential this hybrid can be planted in fields that have tougher soil conditions. The emergence is very fast for early planting. The roots are big to allow better anchoring in looser high organic matter soils as well as extract more nutrients in high-clay soils that can be lower in available moisture later in the season. The stalks are also strong to allow corn to field-dry before its hauled to town. LH 5803 3000GT does very well in corn on corn rotations.

GENERAL CHARACTERISTICS	
• Outstanding yield potential	
• Very good heat and drought tolerance	
• Excellent stalks and roots	
• Complete package for plant health and staygreen
