CORN HYBRIDS TECH INFO SUMMARY

POSITIONING AND MANAGEMENT

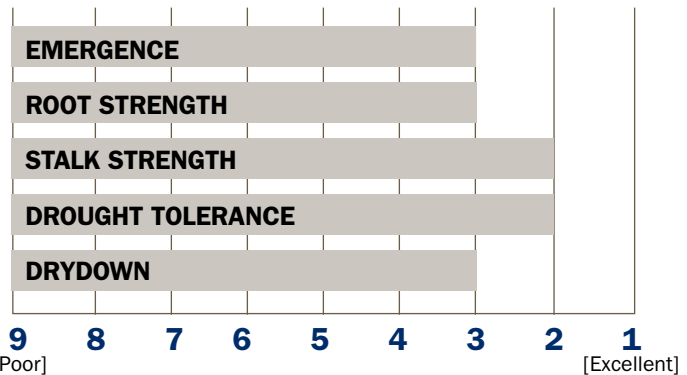

This hybrid has very good emergence and early vigor to handle the cold wet soils early in the spring. It's a medium tall plant that can handle the rolling hills where ear and plant height can get a little short. The excellent stalk strength gives this hybrid time to dry down in the fall. The leaf disease tolerance and plant health are exceptional, allowing this hybrid to perform well where there is moderate to high Gray Leaf Spot pressure in corn on corn rotations. The roots are big to allow better anchoring in looser high organic matter soils as well as extract more nutrients in high clay soils that can be lower in available moisture later in the season.
