

Grid Sampling

Providing accurate soil sampling service to our customers.

THE NEED

With fertilizer costs on the rise, the need for better placement and utilization of fertilizer is greater than ever. Many growers are just barely maintaining, if not mining, nutrient levels in their fields. How much variability is there in your fields? Why not better define your fields through Grid Soil Sampling and obtain the necessary information to take advantage of other services offered through the Seed2Soil management programs.

THE PROCESS

Upon entering soil sampling contract, SciMax representatives will visit the specified fields to obtain grid samples in 2.5-acre grids covering the agreed upon acres. Samples are sent to a lab and results are provided to the grower in report form. They are also stored on a secure online site providing opportunities for review at any time.

THE ECONOMICS

Cost Savings/Acre + better placement and utilization of macro and micro nutrients =
Yield increase because of placement

For more information on how Seed2Soil powered by SciMax can help you maximize yield from your acres through grid sampling, contact your Latham representative today at 1.877. GO LATHAM (1.877.465.2842), or email us at seed2soil@lathamseeds.com!
